

GREEN LEVEL BAPTIST CHURCH

APEX, NC

The renovation of Green Level Baptist Church involved upgrades to all existing systems of the historic structure. The project included the installation of a new heating and cooling system, structural upgrades and a complete cosmetic renovation. In the Sanctuary, the existing antique pews were restored, new pendant light fixtures hung and the existing heart pine floors refinished. The Chancel and Choir areas were redesigned to accommodate more contemporary worship, while the baptistry was expanded and upgraded. To meet accessibility concerns, a handicapped ramp and eighty parking spaces were constructed. The project received an Anthemion Award for Historic Preservation from Capital Area Preservation.
